

Detect GPU in windows

Here is a small guide on how detect what kind of a GPU you have.

- If you are using Windows 10, click START and type in "Device Manager". Open the Device Manager.

- Once you have your Device Manager opened navigate to "Display Adapters" and there you will find the type of your GPU. If you have multiple GPUs you will see a list of them; like in the example below.

Now you can see if you either have an Nvidia or AMD
