SumoKoin Wallet

Installation guide

Download

You can download the installation file from the official website. Here you can pick the desired version.

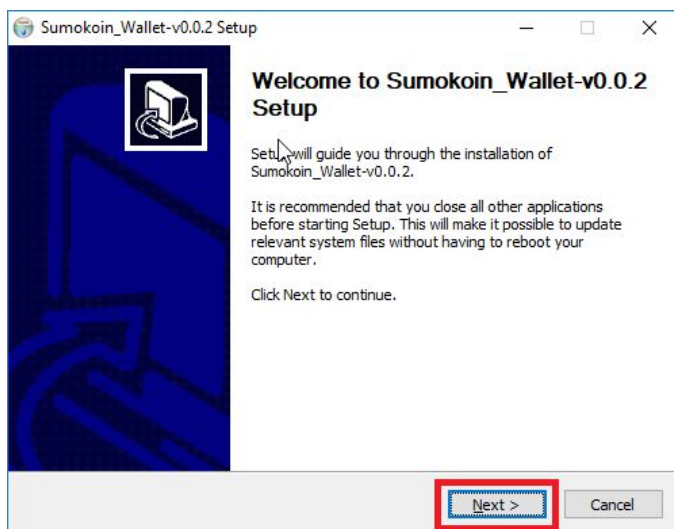

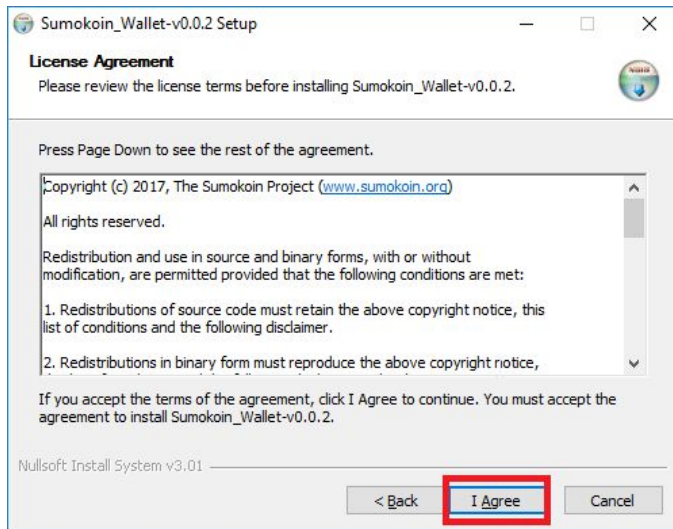

Official website

Windows

SumoKoin wallet has the standard windows installer process. After downloading the .exe from the official website you can start it and follow these instructions.
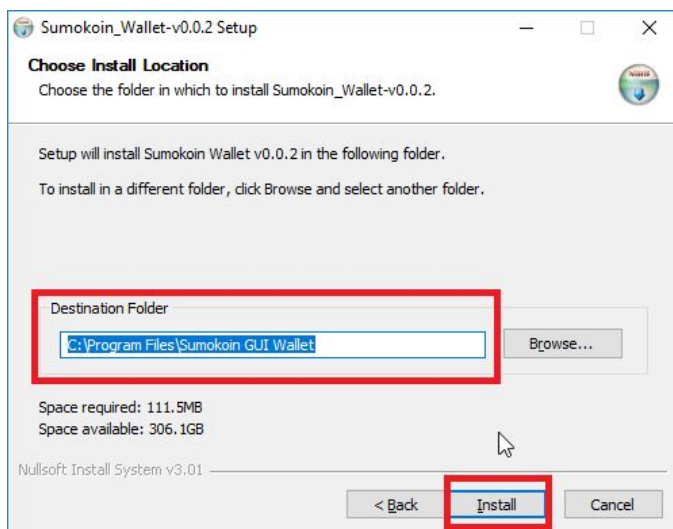

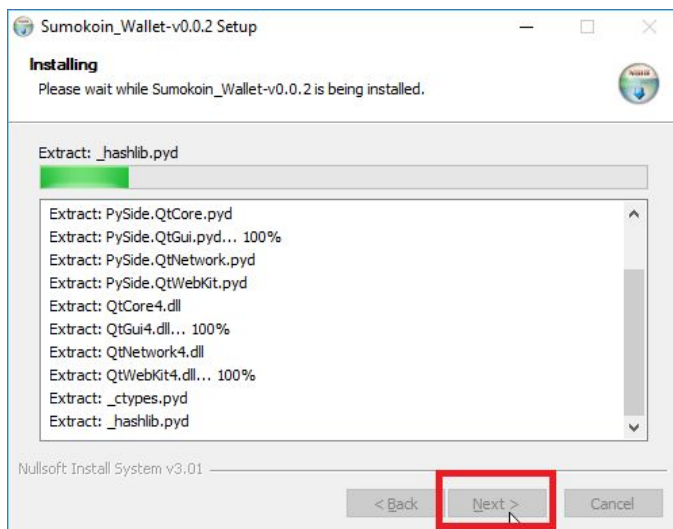

- Start the install

- Agree with the license (feel free to read them)

- Select the installation path and press next

- Let it install and press next

- Click finish to complete the installation

- You'll now find the icon to start the application

Setup - Creating a wallet

Setting up or creating wallet is also very easy

- Open the wallet application

- Click the "Create" button under "New wallet"

- Enter a password

- Choose your seed language. I suggest keeping it English.

- It will now create your wallet

Creating wallet...

Processing blocks... Height#: 0

- It will now show you the details of your Wallet.
  Make sure to write down / save your seed! This is the only way to recover your wallet!

Wallet was successfully created/restored or imported!

Balance: 0.000000000 SUMO
Unlocked Balance: 0.000000000 SUMO

OPEN WALLET >>

● You can now press the open wallet button and start using it.
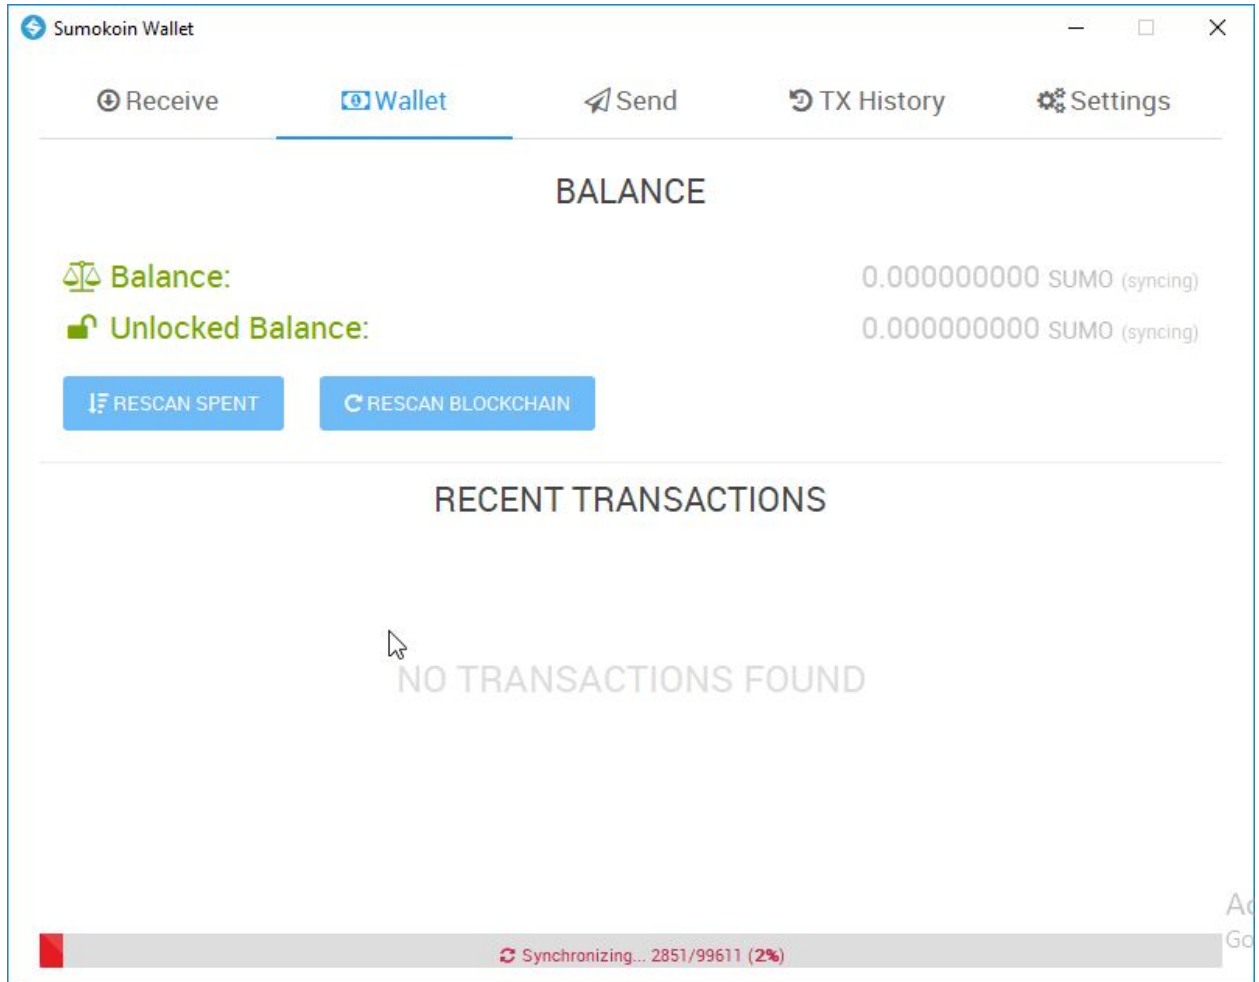

Usage guide

Sumokoin Wallet is very self explanatory
Here are a couple of pages you'll probably be using
   ● The Wallet tab
     this page will show you your balance and most recent transactions

- The Receive tab
  You can access the 'Receive' Tab to see your main and ghost address'

- The Send Tab
  You'll use this page to send Sumo towards others/exchanges

Sumokoin Wallet				— ☐ ✕
⊕ Receive	☑ Wallet	✈ Send	⟲ TX History	✿ Settings

SEND

Amount	0.0	All coins
Address	Paste receiving address here (Ctrl+V)...	Address book...
Payment ID	Paste payment ID here (Ctrl+V, optional)...	
Description	Tx description, saved to local wallet history (optional)...	

Privacy [1] 12 mixins (default) ▾   Priority [2] Normal (x1 fee) ▾

☐ Save address (with payment id) to address book

1. Higher mixin (ringsize) means higher transaction cost, using default mixin# (12) is recommended

2. Only choose higher priority when there are many transactions in tx pool or "Normal" works just fine
